

SILVERING

WHITEPAPER V1.0

PROBLEM STATEMENT

Silver has preserved wealth for thousands of years, the value is transparent, and a tangible way to store value. Now it's not practically possible to use silver as money.

OUR SOLUTION

To make silver practically spendable, we have come out with an innovative idea. With our silvering tokens, silver can be easily incorporated into daily commercial transactions, ensuring security and ease of transfer.

OUR MISSION

We believe cash ought to be genuine riches, it should buy indistinguishable sum in five years from it did the day we earned it. Assume responsibility for your cash. Bring in your cash a genuine advantage to store your riches.

We envision a technologically advanced environment that makes use of stable coins backed by physical assets instead of using volatile currencies. We thrive to make your transactions safer and more stable than any other mode of payments.

WHY BUY SILVER?

It is cheap

Silver is cheaper in relative terms than other investments. it's 1/70th the value of gold which may even protect you against financial crisis. it's much affordable for a mean investor. This metal is yet considered one in all the foremost precious investments someone can make. it's not necessary to take a position during a full ounce of gold. Rather, silver will be more reasonable in these terms.

Growth in industrial use

Almost all products nowadays use silver. From machines to coins and batteries to solar panels, each and everything uses some quantity of silver. There are certain characteristics in silver like electrical conductivity and its reflectivity which makes it an acceptable metal for usage in many purposes. because of its character, the industries are continually utilizing this metal for his or her advantage. This makes silver high in demand. we are able to reasonably expect the source of demand to stay sturdy.

World demand is growing

Global demand for silver is at its peak and is continually growing at a dramatic pace. Major governments have seen record levels of sales in recent years and most are even operating at their peak production immediately.

However, this type of demand doesn't happen during a vacuum. At some point in time, there'll be consequences when the surging demand will meet the crimped supply and this case are highly beneficial for those that possess silver.

More practical for normal purchase

Silver is clearly not that cheaper to shop for but will be practical when it involves selling. Someday you'll face the requirement to sell your ounce of gold and meet your financial demands. it's recommendable to try to to it together with silver. It comes in smaller denominations that gold which makes it easier for you to sell. It gives you more flexibility with the sale and allows you to sell only what you wish at that point.

INTRODUCING SILVERING

Silvering is one in every of the primary silver-backed cryptocurrency. In our world today, our fiat currency has failed its job as a store important . Silver could be a proven means to shield ones purchasing power. an alternate monetary world has been created through Bitcoin and other cryptocurrencies, but there's a scarcity of a stable currency to be used as a way of exchange. Silvering utilizes silvers stability and also the Ethereum network to supply a stable, secure, and trustworthy token to exchange for goods and services. Silver and gold are used as money for the past five to seven thousand years.

within the digital age, however, it's nearly feasible at hand the cashier at the local grocery an oz. of silver as payment. In a pinch, societies could founded tabs and keep track of what's owed since it might be so difficult to create a change of silver, but it's not going we are going to make a change in an exceedingly backward direction when it involves our money. Plus, we are so accustomed transacting with digital money. Silvering provides a system of 100% backed by physical silver. you'll exchange your tokens for physical silver. 1 SLVG will always equal 0.5g of physical silver.

These tokens represent your actual physical ownership! There are not any games here. These tokens are powered by the Ethereum network. Silvering are often bought through the silvering website using Ethereum and may be stored in an ERC20 wallet.

SILVERING EXPALINED

Silvering (SLVG) is "Direct Private Ownership" of investment-grade silver which will be exchanged as private money, redeemed for silver, or sold for USD.

SLVG are often used for transactions a bit like other money. Unlike other money, its value is stable because it's direct ownership of silver.

Each time a Silvering is employed a tenth transaction fee is incurred. a little of this fee is employed to extend the silver each token represents. Thus, the more Silvering are used as money, the more silver your Silvering represents.

SILVER USE ANALYSIS

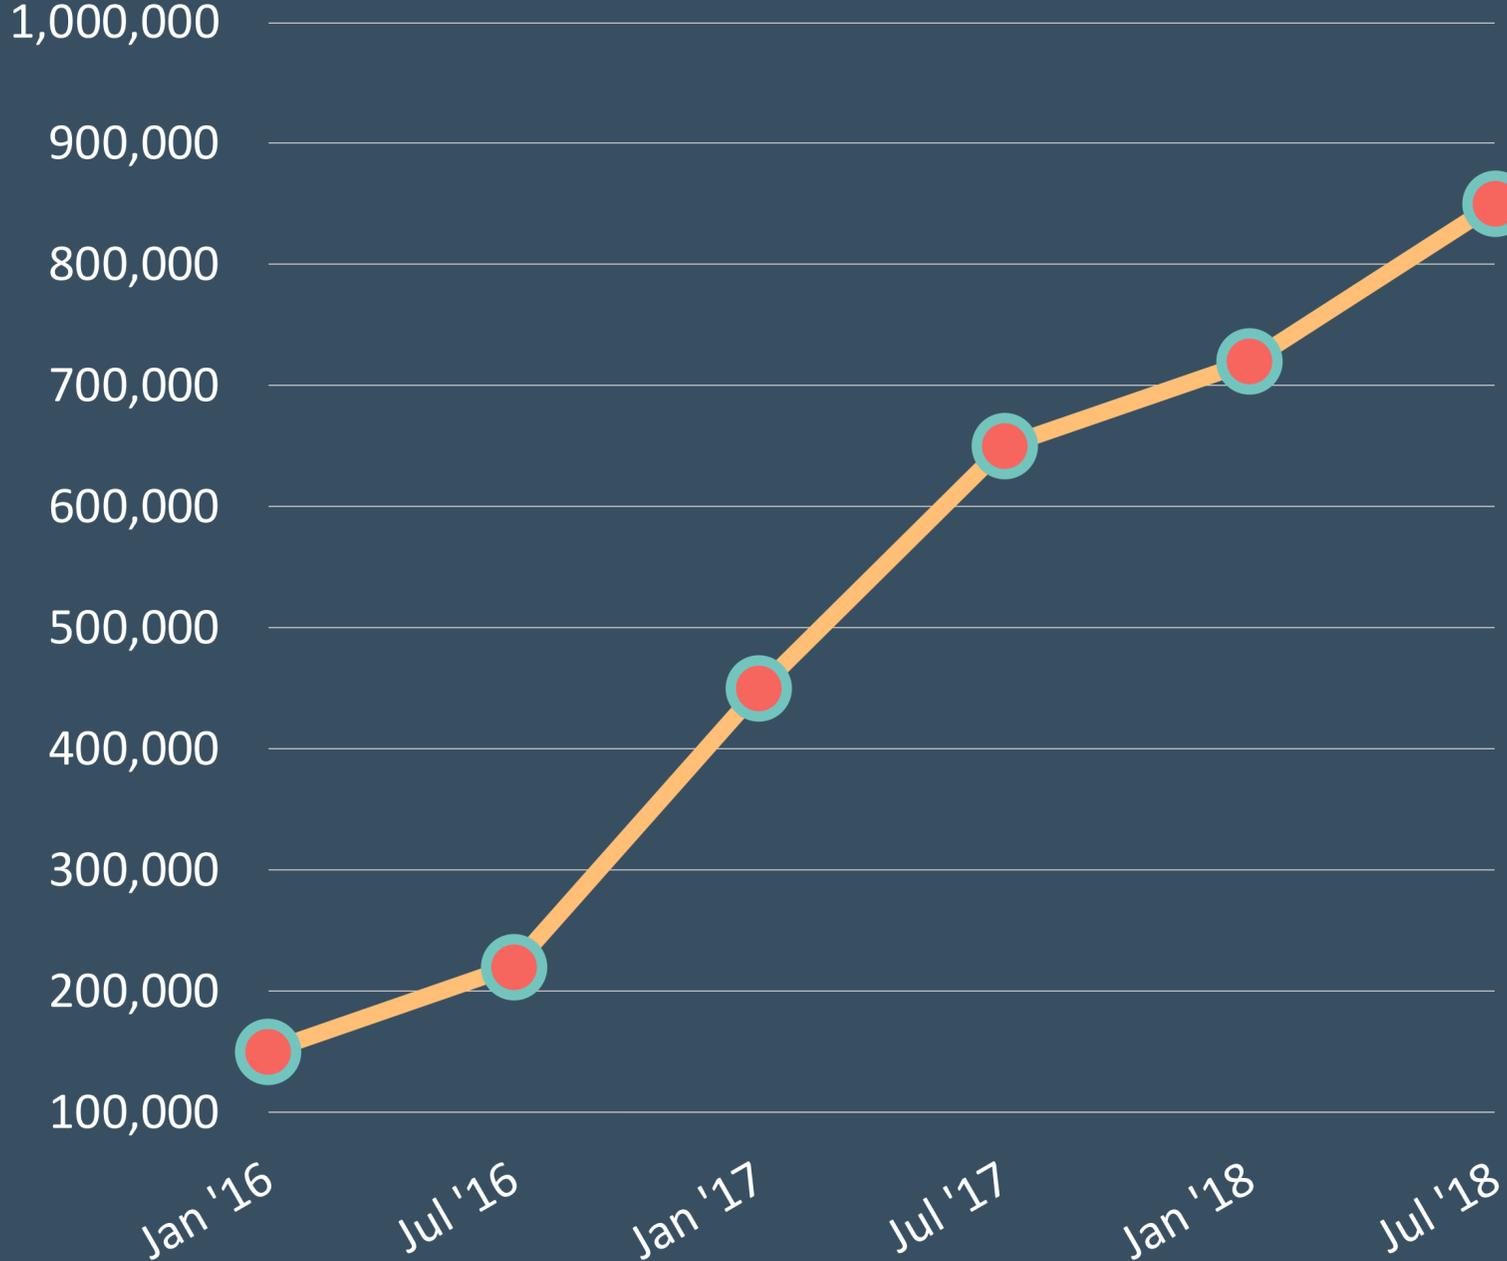

USAGE

Believe it or not, you don't go one day without using a product that contains silver. It's used in nearly every major industry, from electronics and medical applications to batteries and solar panels. Silver is everywhere, whether you see it or not.

CAPITALIZATION

Silver Capitalization

The investments in Silver has seen a tremendous growth over years. People showed sudden interests knowing the importance of investing in silver.

WHY SILVERING?

01

Simple

Government currency and the banking system are complex on purpose to mask the corruption and greed of the system. Silvering is simple to understand the value of your money, and enables you to hold wealth.

Key Feature

02

Transparent

The major advantage of Blockchain is that it works on Peer-to-Peer mechanism. There is no middlemen involved in the transactions and there will be records for every penny you send or receive.

03

Equal for all

Government currencies and financial markets are manipulated and abused. People are helpless victims of the actions of governments. Precious metals are the same for everyone, and the sound money we need.

04

Technology and silver

Silver has preserved wealth for thousands of years, the value is transparent, and a tangible way to store value. Now it's practical to use silver as money.

SECURITY

Cyber Security System

The records on a blockchain are secured through cryptography. Network participants have their own private keys that are assigned to the transactions they make and act as a personal digital signature. If a record is altered, the signature will become invalid and the peer network will know right away that something has happened. Early notification is crucial to preventing further damage.

ETHEREUM WALLET

Your Coins in Safe Place

The main **advantage** a software **Ethereum wallet** has over an online **wallet** is that you keep your own private key. This reduces a lot of the risk of being hacked. However, they are not nearly as secure as paper or hardware **wallets**. Software **wallets** can be broken into by key logging software.

BLOCKCHAIN TECHNOLOGY

Most Advanced System

The basic **advantages of Blockchain technology** are decentralization, immutability, security, and transparency. The **blockchain technology** allows for verification without having to be dependent on third-parties. The data structure in a **blockchain** is append-only.

OUR GOALS

1

Best Profit

The idea is to provide more benefits to the investors. Since the silvering is a stable coin, it ensures high profit margins for the investors.
